

## Success Story

### A Japanese Fortune 500 Networking Company

# Video Service Delivery System

## The Challenge

Network Programs was entrusted with the task to provide an early vision for the next generation enterprise implementing customer centric business processes for broadband network services. This entailed provisioning video service using an ATM switch at the CO over an access network spanning across the customer premises.

## Solution

ATM Switch based core network and distribution elements that constitute the access network support the network. The video service delivery is managed through Level 1 Gateway (L1GW) and Level 2 Gateway (L2GW).

## Benefits

- ◆ User can access the movies from Video Servers on network.
- ◆ The User can also access contents from conventional TV networks.
